

# HOUSE RULES

## How to Prevent a House Fire

for your agricultural housing

### DO NOT disable smoke alarms.

If these are activated while cooking, check your surroundings. Let air flow in so the smoke comes out. The alarm will stop making a noise after a while.

### KEEP the stove and oven clean.

Do not leave anything flammable near the stove or oven. Make sure the curtains do not hang over the stove and never place towels or any other object on the stove.

### STAY in the kitchen while cooking.

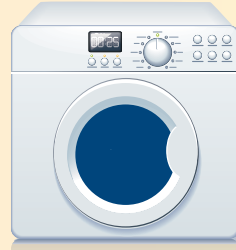

NEVER leave a hot stove unattended. If you have to leave the room, turn off the stove.

### NEVER throw cooking oil into the sink

Please place in a glass jar and discard it in the trashcan.

### CHECK the clothes dryer

Always clean the lint trap after a load is finished. Check regularly behind and around the dryer for any accumulation of lint or clothing that has fallen under or behind.

### DO NOT put objects on top of the boiler

### FIRE EXTINGUISHERS

Always make sure that the extinguishers are placed in a visible place and that their validity has not expired.

### TURN OFF appliances

Always make sure you have turned off and / or unplugged appliances before leaving the house.
